DETAILED ACTION

Priority

1. **Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.**

Specification

2. **The disclosure is objected to because of the following informalities: No Table between Tables 2 and 4, i.e., Table 3, exists.**

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. **The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:**

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

4. **The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:**

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1713

5. Claims 1-8, 12 and 14-35 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ito et al (U.S. 5,548,022).

Ito et al disclose aqueous dispersions comprising an aqueous medium and fine particles containing a reaction product (A) and an addition polymer (B), wherein the reaction product (A) is the reaction product of a compound having a polyfluoroalkyl group and a group containing an active hydrogen reactive with an isocyanate group which includes compounds of the formula Rf-Q-A wherein Q is a bivalent linking group with a polyfunctional isocyanate compound. See, e.g., the Abstract, cols. 2-8 and the Runs of Ito et al.

Inasmuch as no difference being seen between the instantly claimed invention and in the system of Ito et al, applicant has the burden to point out any difference and why any difference found would have been unobvious.
